Clinical Support Tools (CSTs)

ENABLING LEADING PRACTICES IN LONG-TERM CARE

With an aging population and increasing care complexity, the long-term care sector is on the brink of profound transformation. This wave of change is enabled by technology, in the form of Clinical Support Tools (CSTs), deployed at the point-of-care.

A CST is an evidence-informed clinical guideline that enables clinicians to provide individualized and holistic care across a resident's journey, from assessment to care planning and beyond. Enhancing your existing workflows, CSTs empower clinicians with the digital tools to improve resident outcomes and transform the long-term care sector.

THE VALUE OF CLINICAL SUPPORT TOOLS

- Brings leading practices directly to clinicians at the point-of-care
- Reduces administrative burden and releases time to care
- Streamlines interprofessional communications and facilitates transitions in care
- Supports effective care planning that drives individualized actions based on assessment findings
- Builds capacity in nurses through embedded leading practices and decision support
- Simplifies the use of progress notes to guide clinicians to pertinent resident details
- Enables resource forecasting for high-risk residents

THE CLINICAL SUPPORT TOOLS INCLUDE:

- Assessments
- Care Plan and Task Libraries
- Structured Progress Notes
- Data Analytics

CLINICAL SUPPORT TOOLS AVAILABLE

- Behavioural and Psychological Symptoms of Dementia
- Palliative and End-of-Life
- Continence Management
- Skin and Wound Care
- Stable COPD
- Hypoglycemia
