

Clinical Support Tools (CSTs)

ENABLING LEADING PRACTICES IN LONG-TERM CARE

Assess

Integrate

Streamline

Transform

With an aging population and increasing care complexity, the long-term care sector is on the brink of profound transformation. This wave of change is enabled by technology, in the form of Clinical Support Tools (CSTs), deployed at the point of care.

A CST is a holistic decision support tool that enables clinicians to provide individualized and holistic care across a resident's journey, from assessment to care planning and beyond. Integrating with existing workflows and electronic health record systems (EHRs), CSTs empower healthcare workers with the knowledge and digital tools to improve resident outcomes and transform the long-term care sector.

THE VALUE OF CSTs

- Readily integrates with PointClickCare, MED e-care and other leading EHR systems, greatly minimizing disruption to workflow
- Ensures residents receive individualized care
- Provides a clear pathway for informed clinical decision-making
- Facilitates leading nursing practices at the point of care
- Streamlines interprofessional communications
- Supports quality improvement and safety initiatives

KEY FEATURES

- Care Plan items for nursing staff
- Tasks for Personal Support Workers
- Structured Progress Notes to support interprofessional communication
- Six condition-specific assessments that include:
 - Hypoglycemia Management
 - Skin and Wound Care Management
 - Urinary Continence Management
 - Behavioural Symptoms of Dementia Management
 - Palliative and End-of-Life Management
 - Stable COPD Management
