

# Order Sets

CLINICAL CONTENT STANDARDIZATION, AT THE POINT OF CARE

Standardize

Integrate

Streamline

Transform

The knowledge to practice gap is a fundamental challenge faced by healthcare systems around the world. With medical knowledge and best practice increasing at an exponential rate, it can take up to 17 years for best practice to reach the point of care.

The solution lies in Order Sets: sophisticated medical checklists that offer the latest evidence-based treatment options at the point of care. Designed to fit naturally into your healthcare organization or local/regional health authority, Order Sets are the solution to putting best practices into action.

When you become a member of the Order Set network, our team will support you through every step of your implementation, from setting up governance models to localizing and maintaining content. Once deployed, we provide real-time access to adoption, process and outcome metrics – insight that can transform your organization's practice and patient outcomes.

## THE VALUE OF ORDER SETS

- Bring evidence-based, standardized clinical content to the point of care
- Reduce cognitive burden and shift clinician behaviour
- Collaborative network enables learning opportunities from other Order Set implementations
- Data-driven feedback loops allow for continuous improvement and optimization of Order Sets
- Increase care quality while decreasing cost
- Advance strategic goals and progress against quality indicators

## KEY FEATURES

- Structured clinical modules
- Real-time data collection and insight into ordering behaviours and trends
- Order Sets can be integrated into your existing workflow
- Content can be deployed across hospitals and EHR systems
- Interoperable in nature: Order Sets can be accessed through our web-based Entrypoint platform or built into the most advanced CPOE systems (i.e. Epic, Cerner, MEDITECH, Allscripts, Quadramed)
