

Get a comprehensive view of healthcare operations

Spotlight is an advanced analytics tool that translates operational data into key insights that administrators and clinicians can use to drive continuous care improvement.

Key Features

Use Multiple Data Sources: Spotlight is designed to manage and house data from a variety of sources. It incorporates data from Think Research products, as well as secondary sources including hospital EMRs.

Single Dashboard Views: Combine data from multiple systems into a single dashboard for the most complete clinical story possible.

Clinical Performance Tracking: Spotlight provides clinical performance tracking down to the level of individual admissions or clinicians, and up to system-level patterns, for comprehensive micro-to-macro insights.

Powerful Data Engine: Our analytics engine can be customised to deliver key metrics and reporting aligned to your objectives, such as clinical outcomes, performance management, or quality improvement.

Embedded Clinical Terminology: Spotlight takes advantage of embedded clinical terminology within your data. Whether SNOMED CT, ICD, CPT, or payer model terminologies like DRG, Spotlight allows you to use those mappings to tell the best clinical story possible.

Key Benefits

Detailed Insights for Complex Operations: Gain insight into your clinical practice at scale. Dashboards are designed to ensure data is available so you can make the right decision without barriers or delays.

Continuous Care Improvement: Deliver ongoing quality improvements by identifying emerging error patterns before they become systemic trends, helping correct service gaps and inefficiencies while stopping deviation from best practice.

Integrates with Existing Products: Spotlight uses the structured clinical data built into Think Research products used by your organisation. Our products at their core capture clinical data, and Spotlight can help bring that value to the forefront of your analytics journey.

Customized for Your Goals: Our support team ensures successful implementation and use. For complex analytics requirements, we work closely with you to understand your unique requirements and customize our analytics engine to deliver data aligned to your metrics, ensuring you're empowered to make evidence-based decisions.
