

SEAMLESS CLINICAL CONTENT INGESTION

With Cerner-Compatible Order Sets

With medical knowledge increasing at an exponential rate, it takes years for best practice to reach the point of care. This gap is a fundamental challenge faced by healthcare systems around the world, and the solution lies in digital Order Sets: sophisticated medical checklists that standardize clinical content and offer evidence-based treatment options at the bedside.

Standardizing content across a hospital or network of hospitals can be incredibly challenging and resource-intensive. For this reason, Think Research has developed structured, evidence-based clinical content for Cerner, along with the tools to support rapid ingestion, and the project support to ensure success. The libraries of content can be seamlessly ingested into Cerner PowerPlans, Care Sets, Patient Care Plans, and other modules, enabling frontline physicians to deliver the highest standard of care.

In addition, Think Research's collaborative clinical network enables valuable learning opportunities from other implementations, allowing physicians to spend less time sifting through research – and more time with patients. It's the solution to putting best practices into action, transforming patient care and outcomes around the world.

THE VALUE OF CERNER-COMPATIBLE ORDER SETS

EVIDENCE-BASED

Delivers the latest best practices and standardized clinical content to the point of care

ADAPTABLE AND FLEXIBLE CONTENT DESIGN

We work closely with our clients to adapt reference content into structured clinical PowerPlan documents that can be easily ingested into Cerner and localized to suit their needs

SUPPORTS REAL-TIME ANALYTICS

Unique platform allows data to be incorporated into advanced dashboards, which enable rich analytics and insight into ordering behaviors and patterns – across different hospitals, regional networks and CPOE systems

REDUCE COST AND INCREASE CARE QUALITY

Actionable point-of-care recommendations reduce error and inappropriate ordering, and increase workflow efficiency

ADVANCE STRATEGIC GOALS

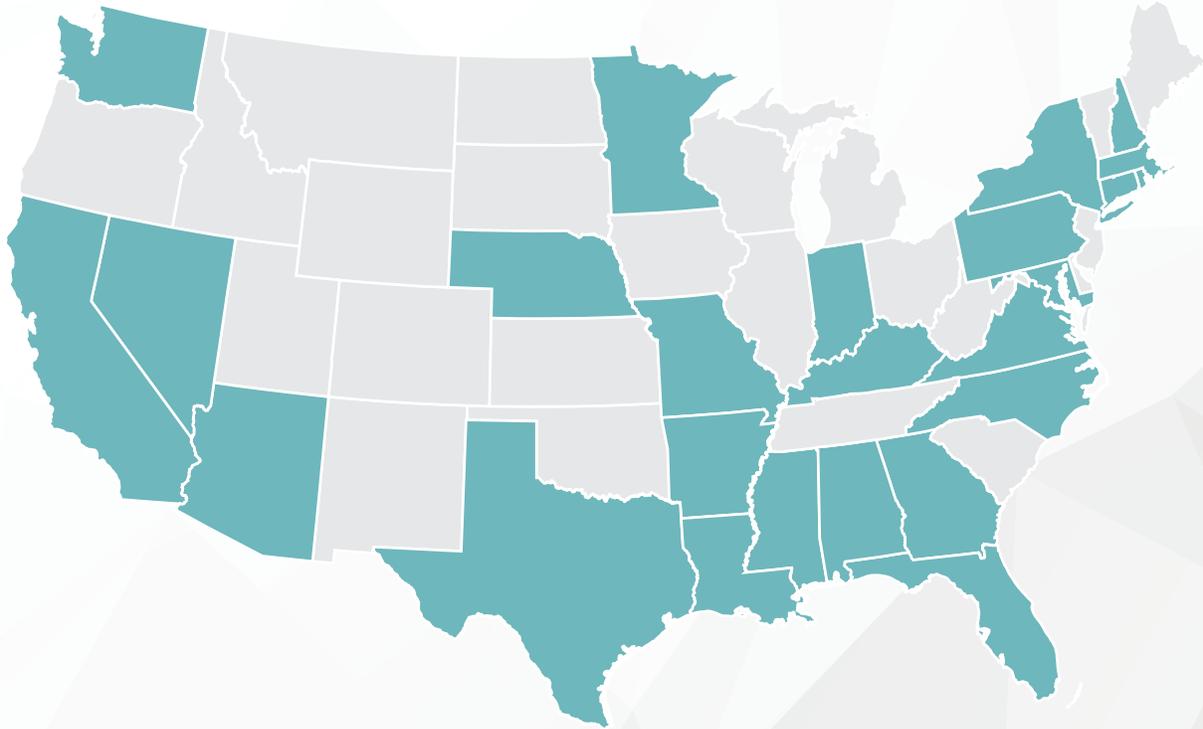

Data-driven insight allows hospitals to track and further progress against key quality indicators

Think Research is a leading provider of evidence-based clinical decision support tools with a focused mission: to organize the world's health knowledge so everyone gets the best care.

For over a decade, our digital tools have empowered clinicians around the world and across all sectors of care: acute, primary and long term. Our solutions standardize the clinical decision making process and are deployed in over 1200 facilities in Canada, the US and the EU, with millions of patients impacted annually.

U.S.A

Deployed in 27 states across 260 sites
